

Vincenz Lachner

WORK EXPERIENCE

Fullstack Developer | Sama AI | November 2023 - May 2025

- Backend integration efforts for a reporting platform, orchestrating data pipelines and interfacing with third-party APIs to dynamically generate dashboards and analytics.
- Architected a schema-driven rendering engine enabling dynamic generation of complex forms, including server-side validation logic, custom field processors, and support for asynchronous data loading.
- Developed internal tools using Material UI and expanded a reusable component library adopted across multiple internal products to ensure visual and functional consistency.
- Implemented PostgreSQL transactions with appropriate isolation levels to handle concurrency during simultaneous user edits of project settings and other resources, ensuring data consistency and preventing race conditions.
- **Tech stack:** NestJS, Angular, AWS, GitHub Actions, Pulumi, PostgreSQL.

Fullstack Developer - Sr. Fullstack Developer | Q6Cyber | November 2020 - October 2023

- Built annotation tools supporting intelligence workflows by developing REST / gRPC endpoints for tagging, categorizing, and retrieving diverse media assets; integrated Elasticsearch to enable fast, flexible search and filtering across large

datasets.

- Managing shared Protobuf schemas to ensure consistency and type safety across teams
- Developed scalable media exploration UI in Angular with an infinite-scroll image carousel and chat-style timeline, leveraging virtual scrolling, lazy loading, and pagination to ensure smooth performance with large datasets.
- Optimized backend data flows by implementing Redis-based caching and request deduplication, significantly reducing latency and minimizing repeated external API calls and slow database queries.

Fullstack Developer | PayFacility | August 2019 - October 2020

- Utilized Kafka for real-time processing and reliable event streaming in fintech workflows, including transaction messaging, fraud detection pipelines.
- Developed a mobile payment application using React Native, integrating with payment gateways.
- Collaborated closely with stake-holders and dev team to deliver scalable, high-performance solutions for fintech workflows.

Frontend Developer and Co-founder | Hello Co. | January 2018 – August 2019

- Research and Technology for the common good.
- Data driven solutions for social causes and NGOs.
- Custom ERPs with data visualization, web applications using React.

EDUCATION

- **Master of Science in Computer Science** | Costa Rica Institute of Technology (TEC) | Ongoing
- **Data Science Specialization** | Costa Rica Institute of Technology (TEC) | 2020
- **Bachelor's degree in Mechatronics Engineering** | Invenio University | 2017

CERTIFICATIONS

- A Hands-on Introduction to Engineering Simulations – ANSYS | Cornell University | 2017
- Introduction to Cognitive Computing - IBM Watson | Cognitiva | 2016
- Introduction to Comsol - MultiPhysics Simulations | COMSOL, Inc. | 2016

CORE SKILLS

Git, GitHub, Angular, React, React Native, Redux, Jest, Vue.js, Node.js, NestJS, GraphQL, Docker, TypeScript, Google Cloud Platform, AWS, MongoDB, Elasticsearch, PostgreSQL, SQL Server, Django, Agile Framework, Jira, Confluence, Figma, Adobe Creative Suite, Tableau, Power BI, PyTorch, Pandas, PySpark, Matplotlib, GitHub Actions, Pulumi, Jenkins, Fastify, Kafka, Express.js

LANGUAGES:

- English (95%)
- Italian (40%)
- Japanese (20%)
