📄 SUMMARY

I am a DevOps and software engineering professional with over a decade of experience, specializing in Kubernetes, CI/CD pipelines, and cloud infrastructures on AWS, Azure, and GCP. I excel in automating tasks with Terraform and Ansible, managing scalable infrastructures, and ensuring stable operations in critical environments. My academic background in systems development and proficiency in English and Portuguese complement my technical expertise.

🧰 EXPERIENCES

🔗 Devops Engineer / SRE

09/2022 - Current

REMESSA ONLINE

I specialize in Kubernetes, with extensive experience in implementation, development, support, and troubleshooting. I integrate Kubernetes environments with ArgoCD and Flux for efficient management, and use Grafana, Prometheus, New Relic, and Loki for advanced monitoring and log management. I develop scalable infrastructures on AWS, utilizing services such as Lambda, EKS, ECS, ECR, EC2, and S3 to optimize performance and scalability, automated with Terraform. I orchestrate CI/CD pipelines with Jenkins, ensuring continuous integration and delivery. Additionally, I manage on-call schedules and oversee critical environments for uninterrupted and stable operations. Notable projects include a 20% reduction in cloud costs through FinOps techniques, optimizing usage and strategic adjustments. Another significant project was updating development tools from outdated versions, enhancing security, stability, and performance, and implementing periodic update policies to keep the environment secure and efficient.

🔗 Devops Engineer / SRE

08/2021 - 09/2022

CI&T

I worked on creating and developing CI/CD pipelines with Azure DevOps, using Terraform and Ansible to automate infrastructure both in the cloud and on-premises. I deployed Kubernetes using Helm Charts, including selfhosted Kubernetes with Rancher. I monitored the entire infrastructure with Prometheus, Grafana, Jaeger, and OpenSearch. I operated in critical e-

💡 GENERAL EXPERIENCE

Master/Expert ★★★★★

🎯 OBJECTIVES

Seeking roles as a DevOps Engineer or SRE.

⚡ SKILLS

MASTER ★★★★★

AWS, CI/CD, Docker, Grafana, Kubernetes, Linux, Prometheus, Terraform, Automation, Monitoring, On-call, Scalability and Troubleshooting.

SENIOR ★★★

Ansible, ArgoCD, Azure, FinOps, Flux, GCP, Helm, Jenkins, Loki, New Relic, Rancher, VMware, Zabbix, Cost Optimization and Security.

MID-LEVEL ★★

DPI, Jaeger, OpenSearch, Snort and WAF.

EXPERIENCES

environments on a 24x7 scale, ensuring high availability and performance in essential systems, always on standby to resolve issues.

DevOps Analyst

04/2021 - 08/2021

KUMULUS TECNOLOGIA

I addressed DevOps needs in client projects, working with Azure, AWS, GCP, Terraform, Azure DevOps, Docker, and Kubernetes. I performed troubleshooting in Kubernetes, resolving critical issues. I led migrations between clouds and from on-premises environments to the cloud. I implemented infrastructure from scratch using Terraform to build scalable solutions. Advanced monitoring was conducted with Zabbix, Prometheus, Grafana, and New Relic, ensuring high availability and system performance.

DevSecOps Analyst

08/2020 - 03/2021

CONEXIA EDUCAÇÃO

Configuration of CI/CD pipelines with BitBucket Pipelines, integrating deployments on AWS using Docker and Kubernetes. Experience in creating EKS clusters, ensuring high availability and scalability. Investigated issues in Kubernetes environments using tools like kubectl and real-time log analysis. Built infrastructure as code with Terraform, automating the creation of environments on AWS. Managed logs with Graylog and monitored infrastructure with Grafana and Prometheus, configuring alerts and dashboards to ensure system health. Administered Linux servers, automating tasks and resolving critical issues.

DevOps Analyst

01/2020 - 08/2020

SMARAPD

I was responsible for creating, maintaining, and executing CI/CD pipelines, accessing client servers, installing dependencies, and deploying applications via Azure DevOps. I monitored clients using Zabbix and Elastic APM. I was on-call for critical environments, ensuring high availability and rapid resolution of issues. I carried out end-to-end implementations of cloud (multicloud) environments with Terraform, including pipelines and the entire monitoring stack, ensuring high availability and prompt resolution of instabilities.

DevOps Analyst

07/2019 - 01/2020

GRUPO CRIAR

I was responsible for the development, testing, and deployment of Linux servers for clients, using Jenkins pipelines. These servers supported IoT systems, establishing secure connections via VPN to store data in the cloud and send it for analysis. Additionally, I implemented cloud environments with Terraform and Ansible, automating the infrastructure. I monitored the operation of servers and IoT systems using Zabbix and Grafana, ensuring the stability and performance of the environments.

Networks and System Administrator

10/2014 - 07/2019

EXPERIENCES

I was responsible for the Data Center, managing the installation, maintenance, and operation of physical and virtual servers using VMware vSphere Hypervisor. I handled digital security by implementing and maintaining firewalls, Snort, WAF, and DPI, ensuring protection both at headquarters and across branches throughout Brazil. I managed Linux servers (Debian/RedHat) and administered cloud infrastructure (AWS and Google Cloud). I oversaw the NOC using Zabbix, monitoring system performance and availability. Additionally, I managed the on-premises network, ensuring secure interconnection via VPN between units, providing efficient and secure communication across the corporation.

Auxiliary of I.T

06/2013 - 07/2014

PHOTOALBUM UNIVERSAL

I can learn much new things, assisting in computer maintenance, servers (Linux and Windows Server), switches, wifi network, nobreaks, help users and cabled network.
